public comment on 2002-6717 of FAA extended operations for multi engine
airplanes - proposed rule -

There is a crash every single day in the US of these airplanes. Obviously FAA
has allowed too liberal rules for airplane use and human use so that
pilots/planes are not observing scrupulous standards of operation. Sometimes
pilots don't even remember to fill the gas tank. FAA is not focused
sufficiently on safety of those of us who live UNDER the planes. We are not even
invited to the party that FAA gives, with only people in the industry knowing
about what FAA is up to. We find out about it later, after airports/airplanes in
our neighborhood are polluting our air, breaking our eardrums and our sleep and
creating crashes and danger for us. FAA acts only for the aviation industry and
is their captive and that is completely wrong and against the dual mission they
were given by Congress. I totally oppose any extension of any time that planes
are allowed to fly. I think the rules are too liberal already and at this point
represent a danger to citizens of our country. We have pilots on drugs who are
allowed to get into their plane and then wipe out a couple of city blocks in
Newark. We have planes that need modification and repairs every single day
forced upon them by FAA. It is clear that the industry is not policing itself.
It is also clear that FAA acts as a lapdog for the industry. It is not the time
to allow any extension of any rules for this industry. It is time to tighten up
the rules already in place, make sure they work and tighten up on the industry.
I for one am aghast at the pollution, noise and danger foisted upon my
neighborhood by FAA. I totally oppose this latest attempt by FAA to put one
over on all american citizens.
